Today’s competitive, information-intensive environment demands continuous application availability. At the same time, organizations need rapid recoverability, while numerous compliance and regulatory mandates require the recovery and preservation of metadata and content. These demands are present at every level of data storage, down to individual records. Achieving the data security and compliant record availability required while keeping the application running is impossible without the right tools. Organizations across many verticals struggle to find these tools, yet at the same time must institute a recovery solution to prevent total data loss in case of disaster.

**SECURE AND POWERFUL PROTECTION**
enChoice SmartRecovery ensures the integrity, accessibility, and authenticity of individual content along with its metadata stored within EMC Documentum. It can recover complete records in response to discrete data loss as a result of corruption, viruses, or human error—without a full system restore. SmartRecovery captures, validates, and recovers discrete content and metadata on demand in response to audits, eDiscovery, inspections, or user errors. The solution’s records retention module aligns with EMC Documentum Retention Policy Services to expunge expired records once compliance requirements have been met.

In case of a disaster where a full system recovery is required, enChoice SmartRecovery complements traditional recovery approaches in reducing data loss. The solution’s time-based recovery feature conveniently rebuilds content and metadata that had been created and captured after the point in time the system was recovered by using the traditional approach.

- Enables “hot” (while application is running) incremental backups of content and metadata to capture additions and changes to the docbase
- Enables recovery from one or thousands of objects from all types of errors or corrupting events
- Ensures objects are restored in their original state
- Increases productivity by recovering at the object level without a full system rollback

**REDUCES COSTS AND TIME REQUIRED**
enChoice SmartRecovery offers powerful benefits with consistent backup and fast recovery. The solution allows you to fully safeguard data assets and enhance data availability while also assuring that EMC Documentum applications continue to function.

- Minimize data loss in case of disaster
- Enables an incremental capture of all objects in the repository, including Sysobject Incremental Capture, Persistent Object Incremental Capture, and Persistent Object Full Capture
• Designed to create a catalog (lookup table) of objects captured
• Gain control and time by specifying the recovery of previously captured objects
• Recover specific objects with Recovery Server

EMC CERTIFIED
The CYA SmartRecovery solution carries the “EMC Certified” accreditation. This accreditation ensures tight integration and product roadmap alignment between the application and EMC platforms. It further assures that the complete solution can be integrated and configured based on a client’s business processes and associated enterprise applications. Certified applications generate rapid return on investment, shortening time to deployment and replacing expensive customizations.

ABOUT ENCHOICE SOLUTIONS
enChoice, Inc. offers a comprehensive range of enterprise content management (ECM) solutions and services, from system design and installation to deployment, hosting, and single-point-of-contact support. Solutions are offered for a wide range of business needs including content management, business process management (BPM), records management, and data protection. enChoice possesses unrivaled ECM expertise, with over 500 implementations and 200 certifications. See www.enchoice.com

ABOUT EMC DOCUMENTUM SOLUTIONS
This solution is one of many content management solutions offered by the EMC Information Intelligence Group and its partners. These solutions help organizations to solve business problems specific to their function or industry. By combining EMC and partner technologies and services, these solutions help organizations to streamline and automate processes, increase productivity, address their information compliance and retention requirements, foster creative work, and lower costs.

ABOUT EMC
EMC Corporation is a global leader in enabling businesses and service providers to transform their operations and deliver IT as a service. Fundamental to this transformation is cloud computing. Through innovative products and services, EMC accelerates the journey to cloud computing, helping IT departments to store, manage, protect and analyze their most valuable asset — information — in a more agile, trusted and cost-efficient way. Additional information about EMC can be found at www.EMC.com
